Full-stack developer building and deploying web apps and APIs with React, Node.js and Python.

EDUCATION

International Institute of Information Technology, Naya Raipur (IIIT-NR) *Aug 2024 - Aug 2028*
B.Tech in Computer Science and Engineering

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, C, C++
Frontend: HTML, CSS, React, Next.js, Progressive Web Apps (PWA), Chrome Extensions (Manifest V3)
Backend: Node.js, Express, FastAPI, REST APIs, Server-Sent Events (SSE)
Databases: PostgreSQL
Tools & Deployment: Git/GitHub, Vercel, Railway, VS Code, Jupyter, Agile (2-week sprints)
AI/ML: LLM API Integration (Groq, LLaMA), Prompt Engineering, LLM Evaluation, RAG, LoRA / Fine-tuning

EXPERIENCE

SDE (Software Development Engineer) Intern, Iconic Styles Pvt. Ltd. *Nov 2026 - Present*
- Support application and AI-agent development for the founding team, including feature development, API integrations, and application testing/debugging across the company's software stack.
- Build and maintain automation workflows and AI agents to reduce repetitive manual work, including automated reports/dashboards built on Google Sheets, Excel, and internal APIs.
- Support software and system management across ERP, inventory, and order-management tooling, with technical documentation of processes and issues for the team.

Founder's Office Intern, FlowSet Hub (AI Services) *Remote, Sep 2026 - Oct 2026*
- Working with the founding team on strategic, operational, and tech initiatives across AI automation, web development, and digital solutions.
- Driving research, execution, and problem-solving in day-to-day startup operations while helping build and scale AI products.

Research Intern, IIT Jammu (in collaboration with Techible and I3C) *Summer 2026*
- Carried out applied ML research across the full pipeline, from data preparation and feature engineering through model evaluation on 3+ experimental datasets.
- Analyzed experimental results and co-authored written summaries for the research team, feeding into 2 candidate publications.

Technical Intern, Rootvestors (EduAnanta Pvt. Ltd.) *Remote, Sep 2025*
- Collaborated with a 5-person cross-functional team to ship features on a 2-week sprint cadence, iterating quickly based on user feedback.
- Contributed to technical tasks on an EdTech platform, gaining hands-on exposure to production engineering workflows.

PROJECTS

Prism, Multi-Model LLM Evaluation Console *React, TypeScript, Node/Express, Python/FastAPI, SSE*
- Built a full-stack console comparing outputs from concurrent LLM providers in real time, using a Node/Express gateway with SSE streaming and per-model failure isolation.
- Built an LLM-judge scoring harness validated against 93 hand-rated responses across 5 task types (Pearson r of 0.88 and 0.90 on factual and support tasks, 0.16 on open-ended content).
- Documented the study in an IEEE-style report; extending it with a LoRA versus full fine-tune cost/performance analysis.

CMLRE Marine Intelligence Platform *React, FastAPI, PostgreSQL, LLaMA 3.3 70B*
- Built and deployed on Vercel/Railway a full-stack marine data platform unifying 3,500+ species records, 698 ocean stations and 1,172 eDNA sequences into one queryable interface.
- Implemented k-mer sequence matching and a natural-language query engine using Groq LLaMA 3.3 70B.
- Built an AI PDF digitizer for scanned cruise reports and a voice interface supporting 6 Indian languages.

EcoRoute, Rural Waste Management Logistics Platform *React, Python, Optimization, PWA*
- Implemented an offline-first PWA with a bilingual voice interface targeting 5,000+ low-connectivity rural households.
- Designed a CVRP-based dispatch engine for rural waste collection in Chhattisgarh, cutting projected route distance by roughly 22% across a 40-vehicle fleet.
- Built Local Government Directory (LGD) hierarchy standardization covering 600+ villages/wards and polymer-level plastic segregation logic.

Other Projects *GitHub*
- MeetMind: AI meeting summarizer with a Chrome MV3 extension for live capture from Google Meet/Zoom/Teams, generating structured minutes, speaker detection and a 0-100 sentiment score across Hindi/Tamil/English (Next.js, TypeScript, LLaMA 3.3 70B).
- Whale Tracker: on-chain dashboard tracking 5 Ethereum whale wallets around 4 major market events; found pre-event transaction spikes of 2-5x baseline in 3 of 4 (React, FastAPI, Etherscan API).

RESEARCH

- Data-Driven Identification of Pollution Sources: co-authored an ML pipeline (K-Means, DBSCAN, PCA) analyzing Raipur air quality data across 10,000+ readings; formatted to IEEE conference standards.

LEADERSHIP & ACTIVITIES

Club Head, Model United Nations, IIIT-NR *2025 - Present*

Events & PR Head, E-Cell, IIIT-NR *2025 - Present*
